Select Publications: Fusarium Wilt – in particular FOV Race 4 in California

Many additional studies have been conducted by Dr. Al Bell and colleagues with USDA-ARS in College Station, TX that can be relevant to discussions of options in dealing with and management of Fusarium oxysporum (race 4 or others) in cotton (contact them for additional information).

In addition, various researchers in Australia have been figuring out how to deal with two virulent strains of Fusarium oxysporum (not race 4) that have had major impact on Australian cotton production and variety choices since the 1990’s. For some perspective of the situation that existed for them as early as the late 1990/s/2000, see:
